

**AMENDMENTS TO THE CLAIMS**

The following listing of claims replaces all prior listings and versions of claims in this application.

1. (Currently Amended) A method for mitigating the presence of scales on an infant's scalp caused by cradle cap comprising the sequential steps of:

a) loosening said scales by massaging a pre-treatment composition into said scalp of an infant;

said pre-treatment composition having a viscosity from about 3,450 to 3,600 cps, as measured by an RVT viscometer with a TA spindle rotating at 10 rpm;

b) using a scale-removing device to remove said scales from said scalp;

c) cleaning said scalp by using a shampoo; and

d) applying a moisturizer to said scalp,

wherein said moisturizer comprises an oily material and wherein said pre-treatment composition, said scale-removing device, said shampoo and said moisturizer are included in a single secondary package.

2. (Original) The method of claim 1, wherein said pre-treatment composition comprises an oil material.

3. (Original) The method of claim 2, wherein said oil material is mineral oil.

4. (Original) The method of claim 3, wherein said oil material is gelled mineral oil.

5. (Original) The method of claim 1, wherein said scale-removing device is a comb.

6. (Original) The method of claim 1, wherein said moisturizer further comprises a butter.

7. (Previously Presented) The method of claim 1, wherein said moisturizer has a viscosity from about 9,000 to about 14,000 cps as measured by an RVT viscometer with a TA spindle and rotating at 10 rpm.

8. (Currently Amended) A kit for mitigating the effects of cradle cap on the scalp of an infant comprising:

a) a secondary package containing at least four components that comprise a pre-treatment composition,

said pre-treatment composition having a viscosity from about 3,450 to 3,600 cps, as measured by an RVT viscometer with a TA spindle rotating at 10 rpm;

b) a scale-removing device;

c) a shampoo; and

d) a moisturizer,

wherein said moisturizer comprises an oily material and wherein said pre-treatment composition, said shampoo and said moisturizer are each individually packaged in a primary package.

9. (Original) The kit of claim 8, further comprising instructions to perform the method of claim 1.

10. (Original) The kit of claim 8, wherein said pre-treatment composition comprises an oil material.

11. (Previously Presented) The kit of claim 10, wherein said oil material is a mineral oil.

12. (Original) The kit of claim 11, wherein said oil material is a gelled mineral oil.
13. (Original) The kit of claim 8, wherein said scale-removing device is a comb.
14. (Original) The kit of claim 8, wherein said moisturizer further comprises a butter.
15. (Previously Presented) The kit of claim 8, wherein said moisturizer has a viscosity from about 9,000 to about 14,000 cps as measured by an RVT viscometer with a TA spindle and rotating at 10 rpm.
16. (Original) The kit of claim 8, wherein said primary packaging is a carton.
17. (New) The method of claim 1, wherein said moisturizer further comprises moisturizing agents that range from about 5% to 70% by weight of said moisturizer.
18. (New) The method of claim 17, wherein said moisturizing agents range from about 10% to 50% by weight of said moisturizer.
19. (New) The kit of claim 8, wherein said moisturizer further comprises moisturizing agents that range from about 5% to 70% by weight of said moisturizer.
20. (New) The kit of claim 19, wherein said moisturizing agents range from about 10% to 50% by weight of said moisturizer.

21. (New) A method for mitigating the presence of scales on an infant's scalp caused by cradle cap comprising the sequential steps of:

a) loosening said scales by massaging a pre-treatment composition into said scalp of an infant;

said pre-treatment composition having a viscosity from about 3,450 to 3,600 cps, as measured by an RVT viscometer with a TA spindle rotating at 10 rpm;

b) using a scale-removing device to remove said scales from said scalp;

c) cleaning said scalp by using a shampoo; and

d) applying a moisturizer to said scalp, wherein said moisturizer comprises (1) an oily material and (2) moisturizing agents that range from about 5% to 70% by weight of said moisturizer and

wherein said pre-treatment composition, said scale-removing device, said shampoo and said moisturizer are included in a single secondary package.

22. (New) The method of claim 21, wherein said moisturizing agents range from about 10% to 50% by weight of said moisturizer.

23. (New) A kit for mitigating the effects of cradle cap on the scalp of an infant comprising:

a) a secondary package containing at least four components that comprise a pre-treatment composition,

said pre-treatment composition having a viscosity from about 3,450 to 3,600 cps, as measured by an RVT viscometer with a TA spindle rotating at 10 rpm;

b) a scale-removing device;

c) a shampoo; and

d) a moisturizer, wherein said moisturizer comprises (1) an oily material and (2) moisturizing agents that range from about 5% to 70% by weight of said moisturizer and

wherein said pre-treatment composition, said shampoo and said moisturizer are each individually packaged in a primary package.

24. (New) The kit of claim 23, wherein said moisturizing agents range from about 10% to 50% by weight of said moisturizer.
